Profile Summary

AIML undergraduate skilled in Python, machine learning, and end-to-end ML project development, including data preprocessing, supervised learning, and real-world deployment.
Actively strengthening data structures and algorithms through competitive programming while building scalable, backend-driven AI applications.

Technical Skills

- Programming: Python, Java, C
- ML/DS Tools: Scikit-learn, Pandas, NumPy, Matplotlib, FastAPI
- Concepts: Supervised Learning, Unsupervised Learning, Model Evaluation
- Platforms: Google Colab, GitHub, GFG, Google Workspace, Streamlit, VS Code, Kaggle

Education

Rajalakshmi Institute of Technology *Sept 2024 – May 2028*
B.E. in CSE (AI & ML Specialization)

- CGPA:8.33/10.0
- **Coursework:** OOP in Java, Data Analysis, Data Structures and Designs

Kalvi Matric Higher Secondary School *June 2022 – Mar 2024*

- 94% in Higher Secondary (CS Group) with strong academic performance in Computer Science, Mathematics demonstrating analytical and technical proficiency foundational for engineering and AI/ML.

Experience

Campus Mantri (Campus Ambassador) *Remote*
GeeksforGeeks *Jan 2026 – Present*

- Representing GeeksforGeeks as the official campus ambassador, promoting coding and computer science learning through events, technical outreach, and peer-driven initiatives.

Machine Learning Intern *Remote*
Codsoft *June 2025 – July 2025*

- Built and deployed machine learning models for spam detection, fraud detection, and movie classification using Logistic Regression and Random Forest, achieving up to **90% accuracy**.

Achievements

- Ranked among top 20 in [GeeksforGeeks](#) at college level by solving 100+ problems across arrays, recursion, and sorting.
- **Participated in Smart India Hackathon (SIH) 2025**, developing a solution under strict time constraints and real-world problem statements.

Projects

AI-Assisted Emergency Triage System [Github Repo](#)

- Built and deployed an end-to-end AI-assisted emergency triage system using patient vital-sign data, machine learning-based classification, safety-focused evaluation metrics, and real-time deployment via Streamlit.

Credit Card Fraud Detection [Github Repo](#)

- Applied data preprocessing and Random Forest classifier to identify fraudulent transactions with precision-focused evaluation.
